

The Roberts Co. — Turning concepts into innovative solutions

The Roberts Co. has been providing, fabrication, construction and plant start-up solutions for heavy industrial clients since 1977. The company's fully integrated engineering group – Professional Project Services – has been providing civil, structural, mechanical, piping, electrical, and process engineering services since 2006.

The Roberts Co. commitment to a project begins even before a bid. The company will not commit to a proposal on any project without having first committed project staff with the proper qualifications and experience that will meet or exceed the requirements of the project. From this point on, to the time the project is complete, Roberts is a dedicated project partner.

The company understands the importance and value of

Oversize shipment of 140 ton, 180-foot long, 2-inch shell thickness distillation column with internal attachments.

accurate scope development with “no future surprises” while developing the project scope. Project staff (everyone from estimating, management and supervision to Quality Assurance/Quality Control and beyond) are all involved in the integral development stages to ensure the entire project scope is captured. Having a complete understanding of the scope and sequence of installation is the key factor for being able to accurately plan and install the work in the field.

Safety results

The success of The Roberts Co.'s safety program rests with each employee. From the president down, the entire staff realizes they have a responsibility to manage the safety program and ensure its success. Coaching, training, teaching and enforcement are all important factors in good safety. These efforts have resulted in continual improvement of the company's statistics and everyone going home safely.

Through a number of service areas, The Roberts Co. offers a wide range of support to the industry. Fabrication Services offer unlimited steel plate fabrication services with capabilities of rolling plate to 3 1/2-inch thick. Complex ASME Code pressure vessels and heat exchangers fabricated from all types of alloys are a specialty.

Field Services delivers a full service “one stop shop”

project solutions group, from grassroots to plant expansion projects. The team self-performs heavy rigging, mechanical equipment setting, piping, process duct, structural steel erection, forming and placement of concrete, electrical power distribution, instrumentation and controls.

Plant Services offers the skill and experience to fulfill difficult maintenance turnarounds and emergency mobilizations with its large multi-craft manpower labor force.

ENGINEERING

- Total Plant Design
- AFE Study Services
- All discipline Engineering
- Plant commissioning
- Construction Management

FABRICATION

- High Alloy, Complex Products
- All Types of Alloy Heat Exchangers
- API Tanks & ASME Vessels
- OEM product line

CONSTRUCTION

- Grassroots/Expansion Projects
- Design/Build Projects
- Plant Services
- Total E&I Services
- Plant Turnaround/ Maintenance
- Structural Steel Erection & Concrete Placement
- Process Piping Installation
