

The Roberts Co. — Total project solutions

The Roberts Co. has been providing fabrication, construction and plant start-up solutions for heavy industrial clients since 1977. The company's fully integrated partnering engineering group—Professional Project Services—has been providing civil, structural, mechanical, piping, electrical and process engineering services since 2006.

The Roberts Co.'s commitment to a project begins even before a bid. The company will not commit to a proposal on any project without having first committed project staff with the proper qualifications and experience that will meet or exceed the requirements of the project. From this point on, to the time the project is complete, Roberts is a dedicated project partner.

Installation of Alloy Towers

The company understands the importance and value of accurate scope development with "no future surprises." The entire project staff, from estimating, management and supervision to Quality Assurance/Quality Control and beyond, are involved in the integral development stages to ensure the full extent of the project is captured. Having a complete understanding of the scope and sequence of installation are key factors in being able to accurately plan and install the work in the field.

The success of The Roberts Co.'s safety program rests with each employee. From the president down, the entire staff takes responsibility for managing the safety program and ensuring its success. Coaching, training, teaching and enforcement are all important factors in good safety. These efforts have resulted in continual improvement of the company's statistics and everyone going home safely.

Through a number of service areas, The Roberts Co. offers a wide range of support to the industry. Their Fabrication Services Division offers unlimited steel plate fabrication services with capabilities

Alloy Tower Replacement

of rolling plate to 3 1/2 inches thick. Complex ASME Code pressure vessels and heat exchangers fabricated from all types of alloys are a specialty.

Roberts' Field Services Division delivers a full "one stop shop" project solutions service, from grassroots to plant expansion projects. The team self-performs heavy rigging, mechanical equipment setting, process piping and duct installations, structural steel erection, forming and placement of

Oversize shipment of 140 ton, 180-foot long, 2-inch shell thickness distillation column with internal attachments.

concrete, electrical power distribution, instrumentation and controls.

Roberts' Plant Services Division offers a skilled and experienced team to fulfill difficult maintenance turnarounds and emergency mobilizations with its large multi-craft manpower labor force.

TOTAL PROJECT SOLUTIONS

"Turn Your Concepts into Reality"

ENGINEERING

- Total Plant Design
- AFE Study Services
- All discipline Engineering
- Plant commissioning
- Construction Management

FABRICATION

- High Alloy, Complex Products
- Heat Exchangers
- ASME Custom Vessels
- OEM product line

CONSTRUCTION

- Grassroots/Expansion Projects
- Design/Build Projects
- Plant Services
- Total E&I Services
- Plant Turnaround/ Maintenance
- Structural Steel Erection & Concrete Placement
- Process Piping Installation
